2) Description:

Title: Elements of Empiricism

Empiricism holds that knowledge is gained through experience and decision-making based on what is observed.

This article discusses four elements of empiricism and their contribution to the creation of a good agile working environment.

Elements of Empiricism are as follows:

- **Transparency** - Transparency is your work which should be visible to the entire team. Transparency is possible when inspecting. Transparency in inspection is always appreciated.
- **Inspection** - Examination makes adaptation easier. Inspection without modification is regarded as ineffective and scrum meetings are meant to inspire change.
- **Adaptation** - When neither the Scrum team nor the organization considers a course correction to be a failure, but rather a normal course of business, adaptation becomes easier. Making real progress in a complex setting, on the other hand, still boils down to anticipating change rather than sticking to a schedule.
- **Trust** – It takes years to build trust, but seconds to destroy it. It is a valuable element for a team as everyone trusts a successful team rather than unsuccessful team.

The above pointers must be implemented in order to improve scrum meetings and, as a result, productivity.

3) Recommendation:

Yes, I would recommend reading this article to understand the elements of empiricism which are useful for contributing a good agile environment.
